

# NaturaLife SuperCrop + NaturaLife AllRounder

## NaturaLife SuperCrop

NaturaLife SuperCrop is a blend of biologically active molecules. It stimulates different metabolic systems of the plant and leads to healthy plant growth. It increases white root system as well as absorption of plant nutrients. Soil application of SuperCrop helps in soil fertility improvement by stimulating growth of soil microflora. NaturaLife SuperCrop contains all necessary nutrients vital for plant growth. It is safe for human being and environment. Application of NaturaLife SuperCrop with AllRounder results into bumper crop yield.

### Main Features :

- It is applicable to all types of plants.
- It increases the yield
- It is 100% nature friendly product.
- It is free from all the chemical pesticide.
- There is not any harmful effect.

## NaturaLife AllRounder

A Boon for Indian Agriculture

NaturaLife AllRounder is unique product having applications in agriculture. It is useful for every stage of crop growth. More than 80% of agricultural sprays do not reach to its site of action and wasted in environment. The expensive agrochemicals are lost in the environment. It happens due to lack of delivery agent. The target delivery of the agro input is necessary which can increase the production as well as quality of the agriculture produce. Similarly soil has problems like salinity and drainage. These all problems are addressed by NaturaLife AllRounder.

### Main Features :

- NaturaLife AllRounder reduces surface tension of the spray water. It spreads a drop of water upto 180 millimeter. Due to its ability to spread the water, pesticide is spread on large area. All parts of plant are covered properly with the spray. Study result shows that NaturaLife AllRounder can increase efficiency of few herbicides by 30 to 60 percent.
- When NaturaLife AllRounder mixed with spray water it forms a thin layer over the plant parts. This layer can not washed by water. Hence sprayed pesticide is protected even the rainfall occurs within 30 minutes of NaturaLife AllRounder application. It prevents the loss of expensive agrochemicals and increases its efficiency.
- NaturaLife AllRounder penetrates inside the plant leaf without harming the plant. It causes stomatal flooding. During the process of penetration AllRounder carries active molecule of agrochemical (pesticide/fertilizer/micronutrient/ PGR/herbicide etc.) inside the plant leaf. AllRounder makes 100% utilization of agrochemicals. Even the products like micronutrient fertilizers, which are hard to penetrate are easily taken inside the leaf by NaturaLife AllRounder.
